

## CLD-A Hot Oil System

- Heat Transfer Fluids<sup>1</sup> to 750°F
- 9 - 400 kW (31 - 1,365 Mbh)  
(Up to 1,200 kW Optional)
- 240 and 480V, 3 Phase, 60 Hz
- Pressurized Operation — ASME Certified to 150 psig @ 750°F
- 300 Lb Carbon Steel Construction
- Long Life 0.475" Dia. Steel Sheath Elements
- High Temperature Centrifugal Pump with Water-Cooled Mechanical Seal
- Bypass Relief Line Protects System in Case of Blocked Flow
- Electronic Digital Temperature and Process Control
- Suction and Discharge Pressure Gauges Monitor Pump Performance
- NEMA 1 Electrical Enclosure Complete with Circuit Breaker, Contactors, Fusing, Switches, Transformers and Pilot Lights
- ASME Safety Relief Valve (Set @ 150 psig)
- External Cold Pressurized Expansion Tank (Optional)

**WARNING** — In hazardous areas, pipe surfaces could achieve temperatures high enough to cause auto-ignition of the hazardous materials present. Consult Article 500 of the National Electrical Code for further information on the maximum allowable temperatures for a specific application.

### Applications

Chromalox CLD Hot Oil Heat Transfer Systems are engineered to operate up to 750°F at a pressure of 150 psig. They are used with Dowtherm®, Therminol® and other high temperature heat transfer fluids<sup>1</sup> which require pressurization to operate at temperature.

CLD systems use a cold expansion tank (optional) that is pressurized. The expansion tank is ASME coded for 650°F @ 150 psig furnished with an ASME safety relief valve. A cold expansion tank makes nitrogen (N<sub>2</sub>) purging optional.

### Construction

Chromalox CLD Hot Oil Heat Transfer Systems are ruggedly constructed and completely self contained (except for the optional external expansion tank). All CLD systems come complete with heaters, controls, pump valves, safety devices and necessary plumbing. The high temperature cast steel centrifugal pump is provided with a water cooled mechanical seal designed for continuous operation at a maximum temperature of 750°F. CLD systems are factory tested and ready to operate.

HEAT TRANSFER

### Typical Piping Schematic for Pressurized CLD Systems

**Note 1** — For a complete list of compatible heat transfer fluids, contact your Local Chromalox Sales office.

# CLD-A

## Hot Oil System (cont'd.)

### Features

**Overtemperature Cutout** protects elements and fluid from overheating

**Electrical Interlock** between pump motor and heating element contactors

**Flexible Piping** before and after pump absorbs vibration and prevents pump damage from thermal expansion

**Inline 0.030 Mesh Strainer** protects pump

**Full Port Manual Gate Valves** on all primary hydraulic piping minimizes pressure drop

**2 Inch Thermal Insulation** around heating chambers minimizes heat loss

**16 Gauge Painted Steel Panels** on all exposed sides — powder coat heat resistant paint

### Options

- Alternate Voltage and kW Ratings to 575 Volt and 1,200 kW
- Microprocessor Based PID or Ramp Soak Temperature Controls
- Electronic Solid State (SCR) Power Controllers
- Electronic Sequencers, Recorders, Monitors, Time Clocks and Digital Communication Interface available
- Special Pumps and other Mechanical Seals
- Type RJC Closed-loop Cooling Modules
- Expansion Tanks Matched to System (recommended)
- Float or Level Switches for Expansion Tank

### Electrical Enclosure Options

NEMA 1 enclosures and open drip proof motors are standard on all Chromalox hot oil systems. All systems (except OTCS) available with optional enclosures that comply with:

- NEMA 4/12 Weather Resistant/Oil and Dust Tight with TEFC motors
- Explosion Resistant Class I, Group D, Div. 1 with TEFC Explosion Resistant motors.

### Dimensions (Inches)

### Dimensions (Inches)

kW	Pump Rate (GPM)	Pump Motor (HP)	Inlet/Outlet Pipe Size 300 Lb. Flg	Dimensions (In.)

**Stock Status:** S = stock AS = assembly stock NS = non-stock  
**To Order**—Specify model, volts, phase, kW, PCN, options and quantity.

1. Expansion tank size should be double the increase in volume due to thermal expansion of heat transfer fluid.
2. Does not include expansion tank; see System Options for details.
